Course Objectives:

- To explain the VLSI Design Methodologies using any VLSI design tool.
- To grasp the significance of various design logic Circuits in full-custom IC Design.
- To explain the Physical Verification in Layout Extraction.
- To fully appreciate the design and analyze of CMOS Digital Circuits.
- To grasp the Significance of Pre-Layout Simulation and Post-Layout Simulation.

Course Outcomes (CO):

- Explain the VLSI Design Methodologies using any VLSI design tool.
- Grasp the significance of various design logic Circuits in full-custom IC Design.
- Explain the Physical Verification in Layout Extraction.
- Fully appreciate the design and analyze of CMOS Digital Circuits.

Grasp the Significance of Pre-Layout Simulation and Post-Layout Simulation.

List of Experiments:

The students are required to design and implement the Circuit and Layout of any **TEN** Experiments using CMOS 130nm Technology.

- 1. Inverter Characteristics.
- 2. NAND and NOR Gate
- 3. XOR and XNOR Gate
- 4. 2:1 Multiplexer
- 5. Full Adder
- 6. RS-Latch
- 7. Clock Divider
- 8. JK-Flip Flop
- 9. Synchronous Counter
- 10. Asynchronous Counter
- 11.Static RAM Cell
- 12. Dynamic Logic Circuits
- 13. Linear Feedback Shift Register

Lab Requirements:

Software:

Mentor Graphics Tool/ Cadence/ Synopsys/Industry Equivalent Standard Software

Hardware

Personal Computer with necessary peripherals, configuration and operating System.

M.TECH. IN VLSI&ES/ES&VLSI/VLSI&ESD

COMMON COURSE STRUCTURE & SYLLABI

Course Code	MICROCONTROLLERS AND PROGRAMMABLE	L	T	P	C
21D06106	DIGITAL SIGNAL PROCESSORS LAB	0	0	4	2
	Semester	I			

Course Objectives:

- To write the ARM 'C' programming for applications
- To understand the interfacing of various modules with ARM 7/ ARM Cortex-M3
- To develop assembly and C Programming for DSP processors

Course Outcomes (CO):

- Install, configure and utilize tool sets for developing applications based on ARM processor core.
- Design and developthe ARM7 based embedded systems for various applications.
- Develop application programs on ARM and DSP development boards both in assembly and C.
- Design and Implement the digital filters on DSP6713 processor.
- Analyze the hardware and software interaction and integration.

List of Experiments:

Part A) Experiments to be carried out on Cortex-Mx development boards and using GNU toolchain

- 1. Blink an LED with software delay, delay generated using the SysTick timer.
- 2. System clock real time alteration using the PLL modules.
- 3. Control intensity of an LED using PWM implemented in software and hardware.
- 4. Control an LED using switch by polling method, by interrupt method and flash the LED once every five switch presses.
- 5. UART Echo Test.
- 6. Take analog readings on rotation of rotary potentiometer connected to an ADC channel.
- 7. Temperature indication on an RGB LED.
- 8. Mimic light intensity sensed by the light sensor by varying the blinking rate of an LED.
- 9. Evaluate the various sleep modes by putting core in sleep and deep sleep modes.
- 10. System reset using watchdog timer in case something goes wrong.
- 11. Sample sound using a microphone and display sound levels on LEDs.

Part B) Experiments to be carried out on DSP C6713 evaluation kits and using Code Composer Studio (CCS)

- 12. To develop an assembly code and C code to compute Euclidian distance between any two points
- 13. To develop assembly code and study the impact of parallel, serial and mixed execution
- 14. To develop assembly and C code for implementation of convolution operation
- 15. To design and implement filters in C to enhance the features of given input sequence/signa

Software Requirements:

Keil for ARM, Code Composer Studio

Hardware Requirements:

ARM Cortex Mx Development Boards, TI TMS C6713 evaluation kit

UNIT - II		Leo	cture	Hrs:	
Nonlinearity and	d Reflection Coefficient: Nonlinearity and Time Variance of syste	m, se	ensiti	vity	
and dynamic rang	ge, Review of MOS Device Physics, MOS device review, Distribute	ed S	ysten	ıs,	
Transmission line	es, reflection coefficient, the wave equation Lossy transmission line	es Sn	nith c	harts	_
plotting gamma,	Noise in FET: Thermal noise, flicker noise review				
UNIT - III		Lec	cture	Hrs:	
High Frequency	Amplifier Design: Bandwidth estimation using open-circuit time	cons	tants	,	
Bandwidth estim	ation using short-circuit time constants, Rise-time, delay and bandv	vidth	, Zer	os to	
enhance bandwic	Ith, Shunt- series amplifiers, tuned amplifiers Cascaded amplifiers,	Nois	e fig	ure,	
Intrinsic MOS no	pise parameters, LNA Design, Power match versus noise match.				
UNIT - IV		Lec	cture	Hrs:	
RF Power Ampl	lifiers: Multiplier based mixers, Subsampling mixers & Mixer Desi	gn, l	RF P	ower	
	formance Amplifiers, Class A, AB, B, C amplifiers, Class D, E, F and	mpli	fiers,	RF	
Power amplifier	design issues.				
UNIT - V		Lec	cture	Hrs:	
	introlled oscillators, Resonators, Negative resistance oscillators, Pha			l loop	os,
	nodels, Phase detectors, charge pumps, Loop filters, PLL design ex	_			
1 ,	esis and oscillator Frequency division, integer-N synthesis, Fraction	al fr	eque	ncy	
synthesis, Phase	noise.

21D57202 3 0 0	
Semester II	3
Course Objectives:	
• To understand relation between automation algorithms and constraints posed by V	LSI
technology.	
 To adopt algorithms to meet critical design parameters. 	
 To design area efficient logics by employing different routing algorithms and shape function 	ons.
 To simulate and synthesis different combinational and sequential logics. 	
Course Outcomes (CO): Student will be able to	
 Understand relation between automation algorithms and constraints posed by V technology. 	LSI
Adopt algorithms to meet critical design parameters.	
Design area efficient logics by employing different routing algorithms and shape functions	•
Simulate and synthesis different combinational and sequential logics.	
UNIT - I Lecture Hrs:	
VLSI Design Automation Tools: Algorithms and system design, Structural and logic des	ign,
Transistor level design, Layout design, Verification methods, Design management tools.	
UNIT - II Lecture Hrs:	
Layout: Compaction, placement and routing, Design rules, symbolic layout, Applications	
compaction. Formulation methods, Algorithms for constrained graph compaction, Cir	cuit
representation, Wire length estimation, Placement algorithms, Partitioning algorithms.	
UNIT - III Lecture Hrs:	
Floor planning and routing: Floor planning concepts, Shape functions and floor planning siz Local routing, Area routing, Channel routing, global routing and its algorithms.	ing,
UNIT - IV Lecture Hrs:	
Simulation and Logic Synthesis: Gate level and switch level modeling and simulation, Introduc	tion
to combinational logic synthesis, ROBDD principles, implementation, construction	
manipulation, Two level logic synthesis.	
UNIT - V Lecture Hrs:	
High-Level Synthesis: Hardware model for high level synthesis, internal representation of in	put
algorithms, Allocation, assignment and scheduling, scheduling algorithms, Aspects of assignm	
High level transformations.	
Textbooks:

M.TECH. IN VLSI&ES/ES&VLSI/VLSI&ESD

COMMON COURSE STRUCTURE & SYLLABI

Course Code	CMOS ANALOG IC DESIGN LAB	I	,	T	P	C
21D57105		0)	0	4	2
	Semest	er	II			

Course Objectives:

- To explain the VLSI Design Methodologies using VLSI design tool.
- To grasp the significance of various CMOS analog circuits in full-custom IC Design flow
- To explain the Physical Verification in Layout Design
- To fully appreciate the design and analyze of analog and mixed signal simulation
- To grasp the Significance of Pre-Layout Simulation and Post-Layout Simulation

Course Outcomes (CO):

- Explain the VLSI Design Methodologies using VLSI design tool.
- Grasp the significance of various CMOS analog circuits in full-custom IC Design flow
- Explain the Physical Verification in Layout Design
- Fully appreciate the design and analyze of analog and mixed signal simulation
- Grasp the Significance of Pre-Layout Simulation and Post-Layout Simulation

List of Experiments:

- The students are required to design and implement any **TEN** Experiments using CMOS 130nm Technology.
- The students are required to implement LAYOUTS of any SIX Experiments using CMOS 130nm Technology and Compare the results with Pre-Layout Simulation.
- 1. MOS Device Characterization and parametric analysis
- 2. Common Source Amplifier
- 3. Common Source Amplifier with source degeneration
- 4. Cascode amplifier
- 5. Simple current mirror
- 6. Cascode current mirror.
- 7. Wilson current mirror.
- 8. Differential Amplifier
- 9. Operational Amplifier
- 10. Sample and Hold Circuit
- 11. Direct-conversion ADC
- 12. R-2R Ladder Type DAC

Lab Requirements:

Software:

Mentor Graphics - Pyxis Schematic, IC Station, Calibre, ELDO Simulator

Hardware:

Personal Computer with necessary peripherals, configuration and operating System.

M.TECH. IN VLSI&ES/ES&VLSI/VLSI&ESD

COMMON COURSE STRUCTURE & SYLLABI

Course Code	EMBEDDED SYSTEM DESIGN LAB	L	T	P	C
21D06205		0	0	4	2
	Semester			Π	

Course Objectives:

- To familiarize with embedded systems programming concepts
- To implement different embedded communication and interfacing protocols

Course Outcomes (CO):

- Familiarize with embedded systems programming concepts
- Implement different embedded communication and interfacing protocols

List of Experiments:

1. Functional Testing of Devices

Flashing the OS on to the device into a stable functional state by porting desktop environment with necessary packages.

2. Exporting Display on to other Systems

Making use of available laptop/desktop displays as a display for the device using SSH client & X11 display server.

3. GPIO Programming

Programming of available GPIO pins of the corresponding device using native programming language. Interfacing of I/O devices like LED/Switch etc., and testing the functionality.

4. Interfacing Chronos eZ430

Chronos device is a programmable Texas Instruments watch which can be used for multiple purposes like PPT control, Mouse operations etc., Exploit the features of the device by interfacing with devices.

5. ON/OFF Control Based On Light Intensity

Using the light sensors, monitor the surrounding light intensity & automatically turn ON/OFF the high intensity LED's by taking some pre-defined threshold light intensity value.

6. Battery Voltage Range Indicator

Monitor the voltage level of the battery and indicating the same using multiple LED's (for ex: for 3V battery and 3 LEDs, turn on 3 LEDs for 2-3V, 2 LEDs for 1-2V, 1 LED for 0.1-1V & turn off all for 0V)

7. Dice Game Simulation

Instead of using the conventional dice, generate a random value similar to dice value and display the same using a 16X2 LCD. A possible extension could be to provide the user with option of selecting single or double dice game.

8. Displaying RSS News Feed On Display Interface

Displaying the RSS news feed headlines on a LCD display connected to device. This can be adapted to other websites like twitter or other information websites. Python can be used to acquire data from the internet.

9. Porting Open w.r.t the Device

Attempt to use the device while connecting to a WiFi network using a USB dongle and at the same time providing a wireless access point to the dongle.

10. Hosting a website on Board

Building and hosting a simple website(static/dynamic) on the device and make it accessible online. There is a need to install server (eg: Apache) and thereby host the website.

11. Webcam Server

M.TECH. IN VLSI&ES/ES&VLSI/VLSI&ESD

COMMON COURSE STRUCTURE & SYLLABI

Interfacing the regular USB webcam with the device and turn it into fully functional IP webcam & test the functionality.

12. FM Transmission

Transforming the device into a regular FM transmitter capable of transmitting audio at desired frequency (generally 88-108 Mhz)

Software Requirements:

Keil / Python

Hardware Requirements:

Arduino/Raspbery Pi/Beaglebone

M.TECH. IN VLSI&ES/ES&VLSI/VLSI&ESD

21D57204b Semester Semester II Course Objectives: To apply the Knowledge in IOT Technologies and Data management. To determine the values chains Perspective of M2M to IOT. To implement the state of the Architecture of an IOT. To compare IOT Applications in Industrial & real world. To demonstrate knowledge and understand the security and ethical issues of an IOT.
 Course Objectives: To apply the Knowledge in IOT Technologies and Data management. To determine the values chains Perspective of M2M to IOT. To implement the state of the Architecture of an IOT. To compare IOT Applications in Industrial & real world.
 To apply the Knowledge in IOT Technologies and Data management. To determine the values chains Perspective of M2M to IOT. To implement the state of the Architecture of an IOT. To compare IOT Applications in Industrial & real world.
 To apply the Knowledge in IOT Technologies and Data management. To determine the values chains Perspective of M2M to IOT. To implement the state of the Architecture of an IOT. To compare IOT Applications in Industrial & real world.
 To determine the values chains Perspective of M2M to IOT. To implement the state of the Architecture of an IOT. To compare IOT Applications in Industrial & real world.
 To determine the values chains Perspective of M2M to IOT. To implement the state of the Architecture of an IOT. To compare IOT Applications in Industrial & real world.
 To implement the state of the Architecture of an IOT. To compare IOT Applications in Industrial & real world.
 To compare IOT Applications in Industrial & real world.
To define the wife and an entering the personal and entering and entering the personal regions of the rest.
Course Outcomes (CO): Student will be able to
Apply the Knowledge in IOT Technologies and Data management.
 Determine the values chains Perspective of M2M to IOT.
• Implement the state of the Architecture of an IOT.
 Compare IOT Applications in Industrial & real world.
 Demonstrate knowledge and understand the security and ethical issues of an IOT.
UNIT - I Lecture Hrs:
Fundamentals of IoT: Evolution of Internet of Things, Enabling Technologies, IoT
Architectures, one M2M, IoT World Forum (IoTWF) and Alternative IoT models, Simplified IoT
Architecture and Core IoT Functional Stack, Fog, Edge and Cloud in IoT, Functional blocks of an
IoT ecosystem, Sensors, Actuators, Smart Objects and Connecting Smart Objects.
IoT Platform overview: Overview of IoT supported Hardware platforms such as: Raspberry pi, ARM
Cortex Processors, Arduino and Intel Galileo boards.
UNIT - II Lecture Hrs:
IoT Protocols: IT Access Technologies: Physical and MAC layers, topology and Security of IEEE
802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and Lora WAN, Network Layer: IP versions,
Constrained Nodes and Constrained Networks, Optimizing IP for IoT: From 6LoWPAN to 6Lo,
Routing over Low Power and Lossy Networks, Application Transport Methods: Supervisory Control
and Data Acquisition, Application Layer Protocols: CoAP and MQTT.
UNIT - III Lecture Hrs:
Design and Development: Design Methodology, Embedded computing logic, Microcontroller,
System on Chips, IoT system building blocks, Arduino, Board details, IDE programming, Raspberry
Pi, Interfaces and Raspberry Pi with Python Programming.
UNIT - IV Lecture Hrs:
Data Analytics and Supporting Services: Structured Vs Unstructured Data and Data in Motion Vs
Data in Rest, Role of Machine Learning - No SQL Databases, Hadoop Ecosystem, Apache Kafka,
Apache Spark, Edge Streaming Analytics and Network Analytics, Xively Cloud for IoT, Python Web
Application Framework, Django, AWS for IoT, System Management with NETCONF-YANG.
UNIT - V Lecture Hrs:
Case Studies/Industrial Applications: IoT applications in home, infrastructures, buildings, security,
Industries, Home appliances, other IoT electronic equipments. Use of Big Data and Visualization in
IoT, Industry 4.0 concepts. Sensors and sensor Node and interfacing using any Embedded target
boards (Raspberry Pi / Intel Galileo/ARM Cortex/ Arduino).
Textbooks:

COMMON COURSE STRUCTURE & SYLLABI

Course Code	DICACOURD MANAGEMENT	L	T	P	C
21DAC101b	DISASTER MANAGEMENT	2	0	0	0
	Semester	I			

Course Objectives: This course will enable students:

- Learn to demonstrate critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Critically evaluatedisasterriskreduction and humanitarian response policy and practice from Multiple perspectives.
- Developanunderstandingofstandardsofhumanitarianresponseandpracticalrelevanceinspecific types of disasters and conflict situations
- Criticallyunderstandthestrengthsandweaknessesofdisastermanagementapproaches, planning and programming in different countries, particularly their home country or the countries they work in

UNIT - I

Introduction:

Disaster:Definition,FactorsandSignificance;DifferenceBetweenHazardandDisaster;Naturaland Manmade Disasters: Difference, Nature, Types and Magnitude.

Disaster Prone Areas in India:

Study of Seismic Zones; Areas Prone to Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post- Disaster Diseases and Epidemics

UNIT - II

Repercussions of Disasters and Hazards:

Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts.

UNIT - III

Disaster Preparedness and Management:

Preparedness: Monitoring of Phenomena Triggering ADisasteror Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and Other Agencies, Media Reports: Governmental and Community Preparedness.

UNIT - IV

Risk Assessment Disaster Risk:

Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. TechniquesofRiskAssessment,GlobalCo-OperationinRiskAssessmentand Warning, People's Participation in Risk Assessment. Strategies for Survival.

UNIT - V

Disaster Mitigation:

Meaning, Conceptand Strategies of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India.

Suggested Reading

COMMON COURSE STRUCTURE & SYLLABI

Course Code	INDUSTRIAL SAFETY	L	T	P	С
21DOE301b		3	0	0	3
Semester				III	

Course Objectives:

- To know about Industrial safety programs and toxicology, Industrial laws, regulations and source models
- To understand about fire and explosion, preventive methods, relief and its sizing methods
- To analyse industrial hazards and its risk assessment.

Course Outcomes (CO): Student will be able to

- To list out important legislations related to health, Safety and Environment.
- To list out requirements mentioned in factories act for the prevention of accidents.
- To understand the health and welfare provisions given in factories act.

UNIT - I Lecture Hrs:

Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

UNIT - II Lecture Hrs:

Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

UNIT - III Lecture Hrs:

Wear and Corrosion and their prevention: Wear-types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working andapplications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

UNIT - IV Lecture Hrs:

Fault tracing: Fault tracing-concept and importance, decision treeconcept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic,automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

UNIT - V Lecture Hrs:

Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

Textbooks:

- 1. Maintenance Engineering Handbook, Higgins & Morrow, Da Information Services.
- 2. Maintenance Engineering, H. P. Garg, S. Chand and Company.

Reference Books:

- 1. Pump-hydraulic Compressors, Audels, Mcgrew Hill Publication.
- 2. Foundation Engineering Handbook, Winterkorn, Hans, Chapman & Hall London.

UNIT - II	MSW – Conversion devices – Incinerators, gasifiers, digestors	Tas	4	Hrs:	10
	s: Pyrolysis – Types, slow fast – Manufacture of charcoal –				
	Manufacture of pyrolytic oils and gases, yields and applications.	Men	ious	- 11	eius
UNIT - III		Lec	ture	Hrs:	12
Biomass Gasifica	tion: Gasifiers - Fixed bed system - Downdraft and updraft ga	sifier	s-1	Fluid	ized
	esign, construction and operation - Gasifier burner arrangement for				
	ne arrangement and electrical power – Equilibrium and kin	netic	cons	sidera	ition
in gasifier operation	0 n	_			
UNIT - IV				Hrs:	
	tion: Biomass stoves – Improved chullahs, types, some exotic c				
	es, inclined grate combustors, Fluidized bed combustors, Design	, cor	istru	ction	and
	tion of all the above biomass combustors.	т		TT -	10
UNIT - V				Hrs:	
•	es of biogas (Calorific value and composition) - Biogas plan				
	gy system - Design and constructional features - Biomass re	sour	ces a	and 1	neir
classification -	ion processes. Therme chemical conversion. Direct comb	netic	'n	hior	naga
	ion processes - Thermo chemical conversion - Direct comb lysis and liquefaction - biochemical conversion - anaerobic dig				
	Applications - Alcohol production from biomass - Bio die				
	energy conversion - Biomass energy programme in India.	J3C1	prod	iuctic	11 -
Textbooks:	biology programme in main.				
	ventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 2018				
	echnology - A Practical Hand Book - Khandelwal, K. C. and M.	[ahdi	S	s T	'MH
2017	Truction Page 11 Truction Page 15 Interest 15 C. tild 15	Luiiui	,	~., 1	,

2. Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley

1. Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991.

M.TECH. IN VLSI&ES/ES&VLSI/VLSI&ESD

COMMON COURSE STRUCTURE & SYLLABI

& Sons, 1996
